

From fish skin to Nordic unicorn

Rooted in Iceland's fishing industry, Kerecis transformed a low-value fish byproduct into a high-value medical technology — creating skilled jobs in a rural region while building a globally successful company.

THE OPPORTUNITY

The fastest-growing segment in a DKK 55bn market

Kerecis entered the biologics segment of advanced wound care — a fast-growing market concentrated almost entirely in the US.

THE CIRCULAR MODEL

One fish. Multiple value streams.

Kerecis increases the value extracted from each fish by turning an underutilized byproduct — fish skin — into a high-value medical technology.

BANKABILITY INDICATORS

What Kerecis teaches us about investing in circular innovation

Kerecis demonstrates that circularity can be more than an environmental benefit. When combined with technology, evidence and market access, it can become a source of competitive advantage and commercial value.

01 Clinically proven, differentiated technology

02 Proven commercial traction and market access

03 Iceland's first unicorn.

"Some of the strongest circular opportunities may not carry a green label. Energy savings, productive use of by-products and better food preservation can create both environmental and strategic value"
