THE OPPORTUNITY

An Ocean Problem. A New Industrial Resource.

Invasive Sargassum seaweed is accumulating in large volumes, damaging marine ecosystems and affecting coastal communities. At the same time, industries such as cosmetics, food and personal care need alternatives to fossil-based ingredients.

WHY IT WORKS

Regenerative by Design

Origin by Ocean's model connects environmental restoration with industrial innovation.

By turning invasive algae into valuable ingredients, replacing fossil-based chemicals and finding uses for residual biomass, the company aims to create value at every stage of the process, linking ocean regeneration with a scalable commercial business.

04 — RETURN

BANKABILITY INDICATORS

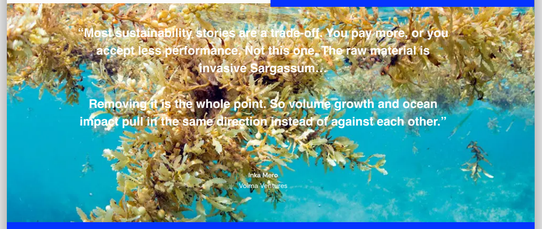

Look for regeneration that can scale

For investors, the key is to look beyond the environmental ambition and understand how the model can scale: from proven technology and customer demand to industrial production, resource efficiency and viable economics.

01 Commercial demand already emerging

02 Capital to build industrial scale

03 Prove industrial economics
